## **Pollution, A Hurdle For Development, And Threat For Population.**

**Harith Hazem Ayob                      Firas Abass Fadhil AL-Biayat**  
**Social department / college of arts- university of Mosul**

### **Abstract**

The man who lives on earth is a part of environment by affection, exploiting, improving or misusing it by smoke, garbage and epidemics pollution.

There is no doubt that the environment is the natural theatre for all human activities and events on earth. Therefore, the environment is affected by them and vice versa. When the human lives safely in a civilized atmosphere in a society, this causes variable degrees of impacts on the environment according to the degree of development and cultural progress in that society.

This research studies how pollution hurdles and threatens population life.

To get this goal, the research includes two chapters. The first chapter includes three subjects. The first subject is: The Methodical And Theoretical Frame For This Research. The second includes Environment Sociology.

As for the second chapter which is entitled; Environmental Security of Iraqi people. It includes two subjects. The first is; pollution in Iraq. as for the second, it is; the Efforts Exerted To Treat pollution problems.

Finally, here are the most important results and recommendations.
